Lembar Penilaian Bercak Gelap — Radar Sentinel-1

Prototipe riset ADE · data arsip publik (Copernicus Sentinel-1) · Karawang & Balikpapan 2017–2019

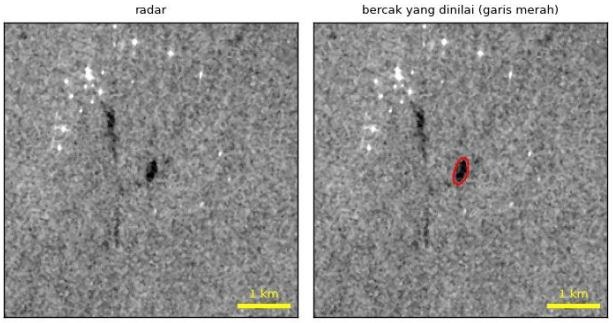

Mohon bantuan praktisi

- Lembar ini berisi 40 bercak gelap yang ditandai alat pada citra radar. Sebagian dari hari tumpahan, sebagian dari hari biasa. Urutan diacak dan hasil alat sengaja tidak ditampilkan.
- Untuk tiap nomor, centang satu: Minyak / Bukan minyak / Ragu. Jawaban "Ragu" sama bergunanya — jangan dipaksakan.
- Gambar kiri = radar apa adanya (gelap = permukaan laut halus). Gambar kanan = sama, dengan garis merah di bercak yang dinilai. Garis kuning = 1 km. Setiap potongan ±6 × 6 km.
- Waktu yang dibutuhkan kira-kira 15–20 menit. Penilaian ini dipakai untuk menyetel alat agar alarm palsunya turun, bukan untuk menilai praktisi.
